Unlocking The Secrets Of SOILS & FOLIARS

Unlocking the secrets of soils and foliars

February 25-27, 2009
Branson, Missouri

Speakers

Dr. Dan Skow

Wendell Owens

Jon Frank

Dan Skow, DVM is widely considered the Dean of the Reams School of Agronomy. Dan first studied with Dr. Reams in 1976 and soon began team teaching with Dr. Reams. Dan is a 32-year veteran in teaching Reams concepts. In this class, Dan will

focus on the importance of soil minerals, the ratio of minerals, and their impact in collaboration with carbon on creating soil energy.

Wendell Owens is a long time partner in IAL. In addition he and his son-in-law have a beef herd and currently farm over 300 acres. About half the acres are farmed organically and the other half biologically.

Wendell makes most of the fertility programs at IAL and specializes in commodity crops, turf and large scale operations. In this class Wendell will be sharing the importance of foliar sprays and how they build on a proper fertility program.

Jon Frank is the newest partner in IAL. He has been with the company since 2001. Jon is active in promoting the concept of nutrient dense foods and its impact on human health. He heads up the Backyard Garden/Market Garden division of IAL and

keeps busy with phone consultations, fertility recommendations and product development.

*Got any nagging questions?
Bring them to Branson.*

OVERVIEW

Are you achieving top grain yields? Are your forages 16 brix or above? Are you producing fruits and vegetables at the highest level of nutrient density? If these things represent the epitome of success for your farming operation what is holding you back?

The answer is surprisingly simple; obstacles, hindrances, blockages, constraints. These are the things that stand between where your farming operation is right now and what you want it to become. The job of a successful farmer is to sys-

OVERVIEW

tematically remove these hindrances so that plants can express their full genetic potential.

Take out your reading glasses because here is the fine print. How do you know what your hindrances truly are? This is the difficult part of the equation that requires considerable finesse. The key to reading these fine print details is a really good pair of reading glasses. For soil this just happens to be the Morgan soil test.

This class will teach you how to read the Morgan

OVERVIEW

soil test so you can remove hindrances in your farming operation. We will also cover important foliar tools.

Foliar sprays offer tremendous opportunity to increase yields and nutrient density. There is just one catch—they need to be used on top of a proper soil program. In other words, foliar sprays are like icing on the cake. Without a proper soil program there is no cake to ice. This is why foliar sprays must be studied and used in the context of a proper soil fertility program.

Unlocking the secrets of soils and foliars

We look forward to
Seeing you in Branson!
